

Reinforcing your Immune system for you & your family!

The immune system is your super computer managing every bodily function.

If the programme is dysfunctional you get sick and age prematurely.

Colostrum is the only substance, through intelligent design, that is able to re-programme the immune system.

Colostrum is multi-functional, especially with re-inforcement warriors, capable of identifying and destroying dangerous bacteria and viruses.

The antibodies are programmed pathogen assassins.

Colostrum - Life's super food and oral vaccination.

IMMUNOGLOBULINS VITAL FOR YOUR IMMUNITY

Your immune system has two, very important parts:

- 1 The innate immunity.** This consists of our physical, and microbiome (gut bacteria) defences against pathogens. Having exceptional gut health can make all the difference here.
- 2 Systemic Immunity.** Our systemic immunity is formed as we are exposed to immune threats. Our immune system will form a memory of the organism that prompted the response and protect us from any later contact with that organism. This is why once we have been exposed to a challenge, we normally form immunity and usually won't get sick even if we are exposed to it again.

Immunoglobulins are the main part of our adaptive immune system, responsible for responding to the various immune challenges we face every day.

Rich in immunoglobulins & other natural antibodies, colostrum supplementation can help improve the microbiome – trillions of microbes living in your gut. Colostrum may also encourage the growth of friendly bacteria (probiotics) in the gut.

The perfect supplement for both innate and systemic immunity.

COLOSTRUM THE KEY IMMUNE-BUILDING COMPONENTS

PROLINE-RICH PEPTIDES to support healthy cell & immune response. PRPs are the 'messenger' molecules that modulate the immune system, acting like a kind of volume switch, turning up when needed and turning down when things are quieter.

GROWTH FACTORS - a must have supplement for your immunity. They help reproduce and regenerate cells and act as a chemical messenger that provides quicker communication between your cells.

IMMUNOGLOBULINS - to build natural immunity and are essential for building a healthy immune system. They help with prevention and treatment of bacteria, toxins, viruses, and other antigens. Colostrum antibodies were used to treat illness and infection prior to the development of modern day antibiotics. In fact, the first oral vaccine for polio was developed from antibodies found in bovine colostrum.

DID YOU KNOW
Colostrum contains a number of components of a healthy immune system. Because it is non-species specific, humans can safely take bovine colostrum for healthy immunity.
