POWERFUL SUPPORT

FOR YOUR IMMUNE SYSTEM

Our bodies' immune systems are designed to fight back against viruses, bacteria and millions of other nasty invaders. But those invaders are getting stronger, deadlier and more widespread. We need all the help we can get.

Defend yourself with Immufort Ultraboost Colostrum.
An ancient secret for modern times.

Immufort is a natural-based supplement that contains an army of proteins and antibodies specifically designed to help your body fight viruses, bacteria and the stresses of everyday living.

IMMUFORT'S IMMUNOGLOBULINS - FIGHTING THE BATTLE FOR YOU!

Immunoglobulins - also known as antibodies - are proteins produced mainly by plasma cells in our blood. They are used by our body's immune system to identify and neutralise pathogens such as bacteria and viruses.

Many of these antibodies work together not only to fight the body's invaders, but to strengthen our immune systems and protect against further attacks.

Immufort contains four of these powerful antibodies - IgG (protection), IgA (anti-inflammatory), IgM (boosting natural immunity) and IgF1 (cell growth and regeneration) - all working together with your body's natural defence systems to fortify and strengthen your health and wellbeing.

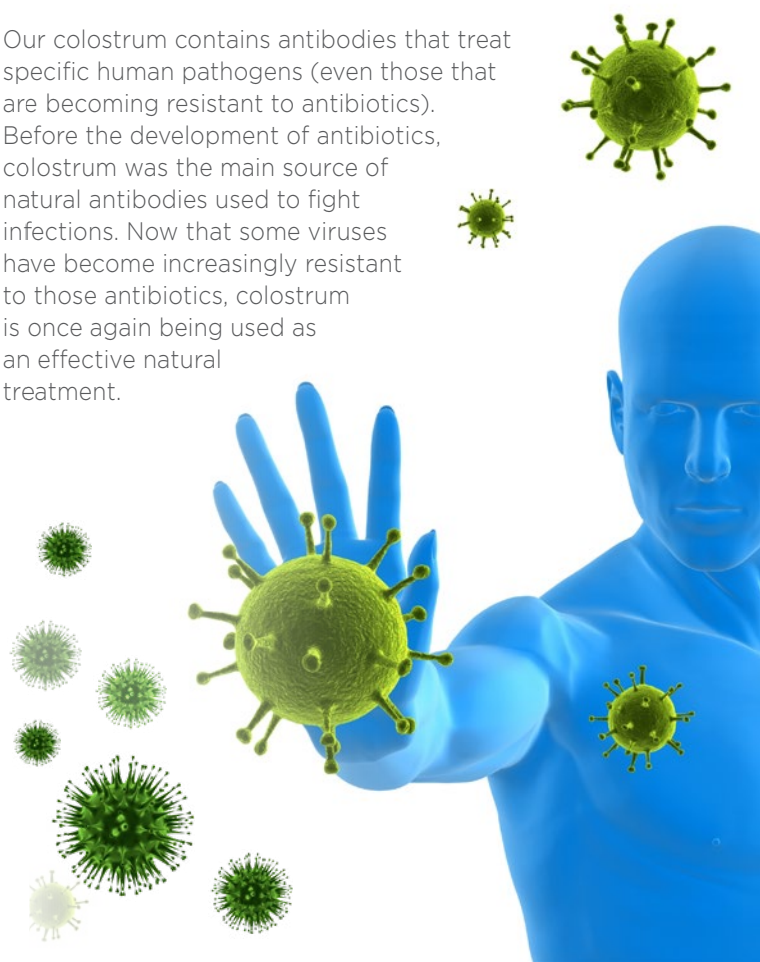

Immufort's MVP **Most Valuable Protection**

Colostrum

Immufort's not-so-secret weapon is colostrum, a natural form of milk produced by the mammary glands of mammals - including humans - in the late stages of pregnancy and the first few days after birth.

Rich in proteins, antibodies, immune cells (lymphocytes) and vitamin A, colostrum is produced with breast milk (but with higher a concentration of proteins) to protect the newborn against disease and infection.

Our colostrum contains antibodies that treat specific human pathogens (even those that are becoming resistant to antibiotics). Before the development of antibiotics, colostrum was the main source of natural antibodies used to fight infections. Now that some viruses have become increasingly resistant to those antibiotics, colostrum is once again being used as an effective natural treatment.

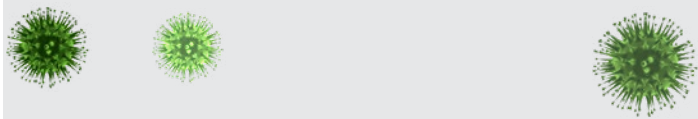

IMMUFORT – THE DEFENCE YOU NEED

Immufort's Antibody Army!

IgG – Our blood's main antibody protects the body from infection, controlling and neutralising invading toxins.

IgA – Vital to immunity, IgA helps stop pathogens from entering the body and causing dehydration, which can lead to much more serious problems. IgA protects the body's internal organ membranes and can also inhibit inflammatory effects like fever.

IgM – The largest antibody in the human circulatory system! These are first antibodies to appear in response to the body's need to boost and protect its immunity when threatened. It links with other antibodies to make immunity stronger. Even more, IgM's biological properties can help diagnose infectious diseases, catching them early enough to treat more effectively.

IgF1 – The growth gene that helps produce a protein in humans similar in molecular structure to insulin. It plays an important role in childhood (promoting growth in almost every cell in the body, especially skeletal muscle and bone, liver, kidneys, lungs, nerves and skin) and continues building up organ, tissue and muscle mass in adults. The body's levels of IgF1 drop during old age, so extra IgF1 is a must!

Colostrum's Extra Armor!

Mineral Strength – Calcium is more than just a mineral to build strong bones. It is essential for cell physiology and mineralisation, particularly to maintain healthy teeth.

Multifunction Shielding – Lactoferrin is a multifunctional protein that has antiviral, antibacterial, antimicrobial and even anti-allergic properties. Apart from its main function to regulate the absorption of iron into the body, it has also been suggested that Lactoferrin may play an important role in the treatment and prevention of the effects of rotoviruses.

IMMUFORT ULTRABOOST COLOSTRUM CONTAINS:

550mg Colostrum, providing:

- Equivalent Immunoglobulins (220mg) - Boosts the immune system
- Equivalent Calcium (1.9mg) - Strengthens bones and teeth
- Equivalent Lactoferrin (9.6mg) - Regulates iron and natural immunity
- Flavouring - Easy on the tastebuds
- Reduced Lactose - Gentle on the stomach

Immufort does NOT contain any added gluten, salt, artificial colouring or preservative!

DID YOU KNOW?

We follow strict international industry guidelines in product testing, food safety and animal welfare. The colostrum New Image™ uses is produced from the happiest cows in the world!

THREE KEY BENEFITS OF IMMUFORT

Protection – Increases the body's immunity and protects against harmful bacteria and infection.

Promotion – Works with the immune system to promote support, balance and wellbeing.

Power – Boosts cell growth and repair throughout the body, to strengthen overall health.

New Image™ Immufort Ultraboost Colostrum complies with international industry and food safety guidelines.

Your health is our priority!

DID YOU KNOW?

Colostrum is no passing fad. In the 1950s, Albert Sabin made the first oral Polio vaccine using immunoglobulin from colostrum.
